**Beckett SolarHot™ Press Release**

For the last 70+ years, R.W. Beckett Corporation has provided a high quality and reliable source of heat for boiler and water heater customers. Starting in the spring of 2009, Beckett will harness a new form of energy to provide heat for appliances...the SUN.

Beckett's new SolarHot™ product offering makes it easy to upgrade a new or existing water heater to a state-of-the-art solar hot water system. This system can provide up to 80% of domestic hot water needs and can be integrated into a hydronic heating system. The Solar Rating and Certification Corporation rated this system the #1 system in its class.

The system includes collector panels offering the highest level of performance and ease of installation; a SolVeloX complete pump package which includes circulators, a heat exchanger, and operating control; and the mounting and plumbing hardware that is necessary to connect to the water tank of your choice. The system is freeze protected and can be specified to operate with glycol or as a drainback system.

Beckett SolarHot™ will save customers money and reduce their energy consumption with its simple but highly efficient system.
